Valparaiso Sewer Rehabilitation

The purpose of this project is to extend the life of select portions of the sanitary sewer system within Valparaiso, Ind.

Benefits of the project will include a reduction of potential groundwater pollution from the leaking sanitary sewer system, as well as a reduction in recurring cases of sanitary sewer backup into residences.

Construction will include lining approximately 19,361 linear feet of existing sanitary sewer lines in 20 utility right-of-way and easement locations across Valparaiso. The sanitary sewers will be lined with a resin-impregnated flexible tube that will be cured in place. Additionally up to 70 manholes in the relined sanitary sewers would be inspected and relined as needed.

Order of Events

Greeting
Jon Costas
Mayor, Valparaiso, Ind.
